| Product Overview               | The Kief Coating Machine is designed for applying kief evenly onto pre-roll products. The machine uses a stable coating process to improve coating consistency, reduce material waste, and increase production efficiency |                                                                                   |                                                                                    |                             |  |  |
| Product Functions and Features | 1.The machine applies kief evenly onto the surface of pre-roll products, ensuring consistent coating results and improving product appearance and quality                                                                 |                                                                                   |                                                                                    |                             |  |  |
|                                | 2.The optimized coating process helps reduce unnecessary kief loss and improves material utilization during production                                                                                                    |                                                                                   |                                                                                    |                             |  |  |
|                                | 3.The equipment is designed with a user-friendly control system, making operation simple and reducing the learning time for operators                                                                                     |                                                                                   |                                                                                    |                             |  |  |
|                                | 4.The machine structure is designed for convenient cleaning and maintenance, helping reduce downtime during daily operation                                                                                               |                                                                                   |                                                                                    |                             |  |  |
